

Structured wiring is a must for every modern residence. New forms of digital entertainment and communication are demanding faster and more sophisticated residential infrastructures.

Connect your home and enjoy the benefits of shared Internet access in every room, watching your satellite or DVD signal on every TV from a single source, and integrating all voice, video, and data in your home into a single expandable system.

Contact Calow Networks today to equip your new home for the demands of 21st century communications.

Free consultation available to customize a package that will suit your needs.

# What structured wiring can do for you...

## Calow Networks can do this...

## What this means to you...

All communication and video cables are hidden in walls at the time of construction.

A movie playing on a cable box or a DVD player can be distributed and controlled from every television in the house.

Provide distribution of infra-red remote control signals throughout the house.

Up to four telephone lines can be distributed to all rooms in the house.

Security camera pictures can be displayed on all televisions on a unique channel.

Computer network connections in every room.

No untidy cables running along floor boards, under carpets, or on the surface of any walls.

Watch a movie from the comfort of your bedroom.

Operate an infra-red controlled device from a separate room.

Answer and make calls from any place in the home.

See who's at the front door or look to see if the baby is okay from any television in the house.

Print from any computer or laptop in the house to a single printer. Use a single high speed internet connection for all computers.
